STATE OF THE STATE	

In Memoriam Doctor James Leake.

Born May 18, 1862. Died Nov. 28, 1896.

At a regular meeting of the Board of Administrators, the following action was taken:

Whereas, during the short term of service of the deceased, as first assistant surgeon of the Charity Hospital, he had won the approbation of the Board by his personal and professional qualities.

RESOLVED, That in his death this institution has been deprived of a gifted, useful and beloved officer.

RESOLVED, That the State of Louisiana has lost a worthy citizen and courteous gentlemen, and the medical profession an able, charitable and talented member.

RESOLVED, That a copy of these resolutions be furnished his family expressing our sympathy at their bereavement, and also to the press for publication.

ANNUAL REPORT

OF THE

BOARD OF ADMINISTRATORS OF THE CHARITY HOSPITAL.

For the Year Ending December 31st, 1896.

CHARITY HOSPITAL, STATE OF LOUISIANA, NEW ORLEANS, February 1, 1897.

To his Excellency, Murphy J. Foster. Governor of the State of Louisiana, and Ex-Officio President of the Board of Administrators of the Charity Hospital:

Your Excellency—It again becomes my pleasing duty, as Chairman of the Board, to present the annual report of the workings of this institution, to which will be found appended a more elaborate and detailed statement from the officers and different committees.

Of improvements may be mentioned the completion of the inter-telephone system, which, in establishing rapid communication throughout the Hospital and its dependencies, has greatly increased the efficiency of the service and superseded the disturbing and antiquated method of bell-signals, to the relief of the sick and suffering.

Tulane avenue has also been paved with asphalt, the sidewalk widened and embellished with flower-beds, and the drain along the entire front of the hospital covered with cast-iron plates. This has materially improved the hygienic condition of this thoroughfare and made attractive and cheerful the approach to the Hospital. The buildings have been maintained in good condition; the Ambulance stock renewed when necessary, and increased security obtained by additional fire stations and means of escape.

The Bacteriological Department, so important an adjunct to a great hospital, is now well equipped with the latest modern appliances, and satisfactory work in this line may be expected during the current year.

An electrical apparatus for the use of the Roentgen Ray in the diagnosis of obscure surgical conditions, has been procured for the Hospital, and will help to solve many surgical problems.

As soon as arrangements are satisfactorily perfected we hope to inaugurate the work long contemplated of erecting suitable buildings for the isolation of contagious diseases; as quarters for the Trained Nurses, whose number, now limited for lack of accommodation, is inadequate to the present needs of the Hospital; and to relieve the overcrowded condition of the wards at times, which is a menace to health and in violation of modern hygienic requirements.

The expenses during the past year have amounted to \$120,654.86, and the revenue \$115,000.00, with a cash balance of \$3700.00, leaving a balance on the 1st of January, 1897, of \$1409.00. It will thus be seen that, notwithstanding the economy practiced in administering this great charity, the Board would have been hampered in its work but for the wise and liberal policy of the State government in increasing the appropriation, which has enabled us to maintain the same standard of excellence as in the past.

On the 1st of January, 1896, there were 712 patients under treatment in the Hospital, and 8816 admissions during the year, of which 3574 were colored. In the Out Clinics 20,248 patients were treated and 64,745 consultations given. The Ambulance Corps did very effective work in responding to 1357 calls.

The resignations of Drs. Parker and Fortier created vacancies which were filled by the election of Dr. James Leake as

First Assistant and Dr. J. M. Batchelor as Second Assistant and Registrar, to classify, compile and preserve the abundant and valuable medical and surgical records of this great Hospital for future reference.

The sad death of Dr. Leake, who, during his short term of service, had displayed marked abilities, and demonstrated his thorough fitness for the responsible position he held, necessitated the appointment of his successor, and Dr. J. F. Schmittle was selected and now worthily fills this position.

The Training School for Nurses has continued to flourish under the able supervision of Miss O'Donnell, whose recent resignation is to be regretted, as she was painstaking, efficient and zealous, and contributed largely to the success achieved. Her successor, Miss Ada Robinson, is an alumnus of the school, and fully qualified to continue the work so successfully inaugurated by Miss O'Donnell. At the commencement exercises of the graduating class in December, twenty-one students received their certificates, eleven of whom were Sisters. The nurses of the Training School deserve the commendation of the Board for their close attention to duty and assistance in the care of the sick and suffering.

The superior administrative qualites of Sister Agnes, aided by her noble corps of good and devoted Sisters, combining gentleness with strength, in the interior management of this institutution, is gratefully recognized and merits our warmest thanks.

The Board of Administrators are thankful to the House Surgeon and his assistants, the staff of Visiting Physicians and Surgeons, and the Resident Students for their zealous and efficient co-operation; to the Pathologist and his assistants; to the Secretary and Treasurer, who, always at his post, conscientiously and ably discharges the duties of his office; to the Druggist; to the Clerk of the Hospital, whose books and reports speak for themselves; to the Engineer, Librarian and employes of the Hospital.

The thanks of the Board of Administrators are also due Messrs. Farrar, Jonas & Kruttschnitt for gratuitous services rendered the Hospital Administration whenever called upon in their professional capacity.

Since the last Annual Report, Messrs. R. E. Craig, H. C. Leake and Dr. F. Loeber, having been appointed Administrators of the Charity Hospital, have efficiently taken part in the management of the institution.

The magnificent legacy bequeathed by Mr. Richards to the Charity Hospital, presumably from \$60,000.00 to \$70,000.00, is acknowledged, and will enable us to continue the work of improvements.

In closing this report I desire to express my sincere thanks to my colleagues on the Board and on committees for their active co-operation and uniform courtesy.

I am very respectfully, your most obedient servant, E. S. LEWIS, M. D.,

VICE PRESIDENT.

Annual Report of the House Committee.

CHARITY HOSPITAL, STATE OF LOUISIANA, NEW ORLEANS, February 1, 1897.

To the Vice President and Board of Administrators :

Gentlemen—The undersigned, your House Committee, beg leave to submit for your consideration their annual report, covering the principal items of improvements, etc., made during the year 1896. They consist mainly of the following:

HOSPITAL INTER-TELEPHONE SYSTEM.

This system, heretofore contemplated, has been fully carried out, and all central points about the Hospital can be mutually communicated with without delay, the general effect being to bring about a close and expeditious connection within the large area of the institution.

PAVING OF TULANE AVENUE, ETC.

One of the most important works of the year just ended, has been the raising and re-grading of Tulane avenue in the front of the Hospital, and the laying of the improved asphalt pavement. The work has been first-class in every respect, and has materially added to the public convenience. In connection with the improvement of the roadway itself a complete line of heavy "east-iron bridge plates" have been placed over the drain in front of the banquette, and extending some four hundred and fifty feet from the corner of Howard to South Robertson street. The plates are placed on the edge of the pavement with iron props on the outside, thus leaving an opening from the street,

and rendering the drain at all times accessible to cleaning. The banquettes have been widened some thirteen feet and flower-beds placed along the entire front, relieving the previous blankness and loaning a picturesque effect to the exterior approaches of the Hospital.

FIRE STATIONS, ETC.

Additional security has been afforded in case of fire, and special provision made, in case of accident, for rapid exit from that overcrowded portion of the Hospital, Wards Nos. 36, 38, 40. This has been accomplished by the institution of three additional fire stations, with necessary appliances, in that vicinity. Work is also about to be inaugurated on the construction of a wooden stairway from the gallery outside of these wards and leading to the yard, for speedy escape.

AMBULANCE SERVICE.

The Ambulance Service has been improved, fresh stock has been purchased, and the Ambulances kept in full repair.

REPAIRS, ETC.

A large amount has been expended throughout the year for repairs, and the ordinary "wear and tear" of the Hospital looked after. The work included painting, calcimining, repairs to boilers, elevator, etc., etc., and, on the whole, has been timely and necessary.

SUPPLIES FOR THE HOSPITAL,

Such as meat, bread, etc., have been satisfactorily furnished by the contractors.

Respectfully submitted,

JOHN T. GIBBONS, WM. G. VINCENT, A. R. BROUSSEAU.

Annual Report of the Finance Committee.

CHARITY HOSPITAL, STATE OF LOUISIANA, NEW ORLEANS, February 1, 1897.

To the Vice President and Board of Administrators:

Gentlemen—Your Finance Committee would respectfully report that an examination of the figures constituting the receipts and disbursements of the Hospital for the year 1896, demonstrates the wisdom of the General Assembly of the State, at their last session, in increasing the appropriation for support of the institution. The additional amount allowed has been absorbed in legitimate and economical expenditures, proving that the natural growth of the service is requiring increased outlays. The beneficent legacy of the late W. T. Richards will enable the Board to partially carry out the plans, now fully inaugurated, for the purchase of adjacent property and the erection thereon of buildings absolutely necessary.

The faith of the Board of Administrators is pledged to hold sacred and inviolable all legacies and donations that philanthropists may direct to the institution, until our final purpose is accomplished. This pledge, we trust, will induce other large-hearted and prosperous citizens to emulate the good example of those who have done so much towards increasing the facilities for the work of the State's great charity.

Respectfully submitted,

GEO. SEEMAN, R. E. CRAIG, HUNTER C. LEAKE.

Miss Hall, toys, clothing, etc.

Sheriff Tebault, Plaquemines, \$10.00.

D. Dekameh, through Dr. S. M. Fortier, \$20.00.

Dr. E. H. Baer, of Charleston, S. C., \$10.00.

Daniel Close, Patient in Ward 8, \$10.00.

Lorenzo Saldino, Patient in Ward 9, \$5.00.

Copper Smiths and Sheet-iron Workers, \$15.00. Miss Stafford, \$5.00.

Samuel Bernard, \$5.00.

British Consul, for W. Ballon, Patient, \$67.00.

M. P. Methoff, \$10.00.

Mr. J. B. Ghisalberti, \$20.00.

Spanish Consul, for Patient, \$10.00.

Mrs. Richard Milliken, \$20.00.

Mrs. Dr. Seeman, \$10.00.

Annual Report of the House Surgeon.

CHARITY HOSPITAL, STATE OF LOUISIANA. NEW ORLEANS, February 1, 1897.

To the Board of Administrators :

Gentlemen—The efficiency accomplished in the practical and scientific service of this institution, demonstrable in the measurbly improved statistical showing for the year, I have the honor to herewith submit:

In the broadened office of its benefits the instution rendered the service of its charity to 32,876. On January 1, 1896, 712 patients were remaining in the Hospital and during the year 8816 were admitted; 5242 white and 3574 colored. The number discharged was 7518, and the daily average throughout the year was 715 patients. January 1, 1897, 868 patients were remaining. Of the total number 9528, treated in the indoor service of the institution 1142 died, giving a total mortality of 12 per cent. Subtracting from this number 348 deaths that occurred in patients admitted in a moribund condition, and dying within thirty-six hours of admission, would give the mortality rate proper of but 8 per cent. In the Maternity Department 232 babes were born, and the mortality among mothers was less than 1 per cent., from all causes.

The Amphitheatre Service has been made replete with all accessories, including the Roentgen Ray apparatus, Electromotor bandage roller and instrument repair paraphernalia, and the more modern facilities for the perfection of its detail work of

asepsis and the safeguards protective of the individual patient. Its accident service gave attention to 3100 patients, and 708 major surgical operations were performed.

The Outdoor Clinics have been renovated and are, as ever, active in the relief to the needy applicant of its succor, and rendered medical and surgical attention to 20,248 patients, to whom 64,745 consultations were additionally given. The happenings of our enlarging city, and the area covered in the mercy missions of our Ambulance Corps, entail much wear to the equipments, that with the improved streets would be lessened by the use of the rubber tire that is in vogue in the like service of Eastern cities. The enhancement of comfort in conveyance and the diminution in the cost of repairs, for which it is claimed, prompts the recommendation for the trial. The Corps has shown a worthy competency and interest in the work, answering 1357 calls during the year.

The Pathologist, Dr. O. L. Pothier, in the report herewith accompanied, details the work of the department for the year, in which its actively increasing usefulness is made plainly manifest. On December 16th, was formally inaugurated, adjunctive to this service, a Bacteriological Department, adequate to our purpose and essential to proper diagnosis, efficient treatment, and the scientific progress of our institution. The untiring efforts, diligence and ability, of Dr. Pothier, displayed in the conduct of the department, is deserving of the fullest praise. The Registrar has filed 1170 case histories since assuming the duties. In the course of the early months of the New Year the first issue of the Hospital Bulletin will appear.

The Training School for Female Nurses meets every promise in both efficiency, progress, and medical assistance, and of which a full report has been made to the Medical Committee.

The year records additional improvements in every division, by your action and approval. The abolition of the noisy system of bell-ringing that had been the method of signals for the past sixty-four years, and the substitution of the inter-communicating telephone and signal service; the introduction of portable and pertinent accessories to ward necessities; the surgical dressing rooms for major surgical cases, relieving the ward patients of the noisome effect of the surgical toilet and giving to the attending surgeon the necessary conveniences; the intelligent gauging of atmospheric conditions within the building; the Registrar and the deposit with this official of every medical and surgical case history upon the discharge of the patient, for the purpose of compilation and as a reference for the medical profession; the improvements in the surroundings, in point of quiet and ornamentation; appropriately demonstrating the high plane upon which human indulgence is calculated, and elaborative of achievements in both the purpose of charity and medical results.

The ward space to be acquired, following the erection of the buildings now in contemplation, will permit of the re-distribution of the various services upon a more rational division, and in accord with modern pathology relative to their infectious or contagious nature. The surgical division would thus be relieved of the danger of sepsis and the medical service of the liability to tubercular and other infections.

Concentrated in special services the well-being of these classes of patients would be insured, and the introduction of the more modern and systematic methods of treatment, the compiled and comparative benefits of observation, and the results toward the improvement and cure of these conditions would be infinitely improved.

The creation of special funds for the purchase of orthopedic appliances, and for the purpose of assisting impecunious patients to their homes in the surrounding country, would, I believe, meet with a generous response, and, in addition to its charity, relieve the institution of the crippled and penniless poor.

Espousing the work of the institution are many of our citi-

zens who, in the spirit of philanthropy, will aid in the purpose of improvements, such as the wisdom of your Board may deem meritorious, and which, in the ensuing year, it will have under consideration.

The Sisters of Charity giving a zealous and intelligent nursing to the sick, the model cleanliness of our institution, and in their mission of charity morally influencing the discipline and contentment of our patients, render the incalculable good that must always deserve our grateful acknowledgment.

The visitation of death in the personnel of our corps, smiting in relentless pity, in the vigor of manhood and a brilliant career, our talented First Assistant House Surgeon, Dr. James Leake, occasioned the loss of a valued officer and a sincere general grief.

The valued service of the Visiting Staff is gratefully acknowledged.

The Chemist and Druggist, Mr. J. Simeon, the Clerk, Mr. James Leake, and the Engineer, Mr. John Ponder, have been unremitting in their labors and are specially commended.

My assistants, Drs. J. F. Schmittle and J. M. Batchelor, have displayed a very laudable interest in the work of our charity.

In the general summing up of the improvements and the satisfactory service of the work of the Hospital, inaugurated during your administration, the comfort and care of the sick have received the bent of all effort, and our institution the rank of a modern hospital.

Respectfully submitted,

J. D. BLOOM,

HOUSE SURGEON.

Pathological Department.

CHARITY HOSPITAL, STATE OF LOUISIANA, NEW ORLEANS, February 1, 1897.

To the Board of Administrators of the Charity Hospital:

Gentlemen—I beg to submit the following annual report of work done in the Pathological Department during the year 1896.

We have examined during the last twelve months 2,7.1 specimens of urine, or an average of 227 specimens per month; 672 specimens of sputum, of which, 306 contained bacilli tuberculosis, and 366 were free from bacilli, giving an average of 56 specimens of sputa per month.

Besides, the department has received and examined 84 specimens of tissues, 1 specimen of cyst, 4 specimens of ovaries and tubes, 2 specimens of testicles, 5 specimens of glands, 21 specimens of tumors, 1 specimen of thyroid, 1 specimen of pustubes. 34 specimens of kidneys, 32 of liver, 31 of spleen, 21 of lungs, 1 of brain, 17 of pancreas, 6 of heart, 4 of intestines, 1 of stomach, 1 of mesentery, 1 of trachina spiralis, making a total of 258 specimens of different tissues requiring hardening and section cutting; and, as in making sections, there are no less than ten sections cut for each specimen, these 258 specimens represent at least 2,580 sections made. Of these no less than four mounted specimens are made and examined, which represent 1,032 examinations and finished preparations, from which, when it is a specimen from a tumor for diagnostic purposes, a specimen is kept in the collection of the department. Sections from Autopsies are not all kept, only a few typical specimens being preserved for the department.

During the year the microscopical collection of the department was increased of 86 permanently mounted specimens, and 100 photographs were taken and mounted.

This year our autopsy record has swelled to twice the number of last year, reaching 296 autopsies for the year.

The following is a brief summary of the work of the department for the year:

Specimens of Urine examined	9 795
Specimens of Tumors examined.	2,131
Specimens of Vomit examined	
Specimens of Fluid examined	21
Specimens of Pus examined	
Specimens of Hair examined	24
Specimens of Blood oversignal	29
Specimens of Forces armined	104
Specimens of Feces examined	4
Specimens of Tissues examined	84
Specimens of Kidneys examined	34
Specimens of Liver examined	32
Specimens of Spleen examined	31
Specimens of Lungs examined	21
Specimens of Brain examined	1
Specimens of Pancreas examined	
Specimens of Heart examined	17
Specimens of Glands examined	6
Specimens of Intestines examined	5
Autopsies held	4
Autopsies held	296
Photographs taken	100
Specimens permanently mounted for collection	86
During the past year several important additions	

During the past year several important additions to the general routine work of the department have been made. The autopsies are now numbered, and a specimen from each organ is kept imbedded in paraffine for future reference. The organs from each autopsy are examined microscopically and a report sent to the respective wards to be filed with the history and

autopsy report of every case. A mounted microscopical specimen from every tumor and tissue sent for diagnosis is kept in the collection properly labelled for reference, and besides the remainder of the hardened tissue is kept in preserving fluid should any sections be required for other examinations.

The examination of blood in malarial cases has also been established as an every day work and the demand for such examination is daily increasing. Widal's method of serio-diagnosis in typhoid fever is also now a daily routine work of the department. The bacteriological laboratory recently added to the department has facilitated the adoption of this method. Several cultures have been made to ascertain the kind of infectious bacteria contained in pus from surgical cases.

The examination of urine and sputa has been made more accurate by the use of the centrifuge for sedimenting these specimens.

The museum, however, has not been increased during the year on account of the lack of suitable jars for preserving specimens. We have several specimens on hand at present that could be mounted and permanently preserved had we the means of keeping them.

In concluding this annual report, gentlemen, I wish to commend the valuable and intelligent assistance of Dr. S. F. Mioton, the assistant pathologist, and thank him for his readiness to assist me in increasing the general usefulness of the department to the Hospital. I wish also to thank Messrs. Landry and Perkins, the students assigned to the department during the year, for the aid that they gave during their term of service.

Respectfully,

O. L. POTHIER, M. D.
PATHOLOGIST.

Report of the Directress.

CHARITY HOSPITAL, STATE OF LOUISIANA, NEW ORLEANS, LA., December 11, 1896.

Dr. E. S. Lewis and Dr. F. Loeber, Members of the Medical Committee, Charity Hospital Board of Administrators:

Gentlemen—With the confirmation of the supplemental benefits to the work of our Hospital which the School of Trained Nurses has wrought, both in purpose and actuality, I feel the more acutely the honor of presenting this account of my stewardship in its affairs for the year closing with to-day.

Happily has been realized every anticipation, and, in no proud boast of the merit of its success, I beg to review as evidence of its incalculable good to our city, our State and ourselves, the employment of our pupils who, at the close of our last session, numbered its thirteen graduates embarking upon the work of their profession in the service of the public

Of the number, one has been specially honored in receiving a call to St. Louis, Mo., as Superintendent of a school in training, reflecting the recognition of the standard and good name of our school. Two have taken up their residence and work in parishes of the northern part of this State, and the remaining ten have located in this city, answering calls throughout the surrounding country and winning for themselves the encomiums of our citizens and the medical profession.

To facilitate the public in the supply of their calling need of nurses, and in concert with the feeling of our graduates, over whom it has been my pleasure both to encourage and foster the sentiment of maternal regard for their Alma Mater, I direct their appointment to calls, from applications made direct to the institution, selecting them in alternate order, equally satisfying their wishes and that of the general public in a prompt and efficient service.

Thus is it hoped for, to be ever in touch with their exertions and to wield their services to the best advantage of the sick and themselves.

They have, in this manner, become identified with the standard of benevolence carried out by your Board's comprehensive administration, and cannot fail to attract philanthropic friends to a substantial approval of its reward deserved as a charity.

At the close of the last session thirteen pupil nurses were remaining. During the year 205 applications for admission into the school were received, of which number twenty-two were accepted, keeping pace with the school's capacity in positions made vacant by graduation, and the necessary withdrawal of probationers or pupils unqualified for the work.

The remaining applications await the further vacancies that follow this occasion, and their acceptance seriatum.

Of the number counted in the total of students, six were sent away, two on account of ill health and the other four being not suited to the work.

The sorrow of death cast its gloom over the school in the demise of Miss Eliza Stewart, of Kirkwood, Miss., on August 1st, 1896.

Miss Stewart was admitted on March 18th of this year, and having served a satisfactory probationer was of the accepted number, and with her many virtues bore promise of all the goodly traits of a successful nurse.

Words of condolence, in resolutions affectionately framed, were sent to the bereaved parents by the class.

With the close of this session I had the pleasure to recom-

mend to the Faculty, for a test of their qualifications for graduation, ten pupil nurses and eleven Sisters of Charity—whom honored by their complimentary release through the recommendation of the Chairman to you, will earry with them our affectionate wishes for heaven's choicest blessings.

With this depletion of the number, eighteen pupils, who having shown a commendable industry, enter their second year of service, with eight Sisters of Charity; the remaining vacancies having been allotted to accepted candidates.

The instruction in Invalid Cooking has been conducted within our institution by two thoroughly efficient Sisters of Charity, and there is presented for your inspection to-day an exhibition of their own handiwork and its success.

And thus, in the desserts of its advantages as an educational, humane and philanthropic adjunct teeming with the success attending, an early recognition is hoped for in the construction of its own domicile. It is both pleasing and encouraging to have the countenance of our distinguished Governor, Murphy J. Foster, who has so materially assisted our institution in so many benefits, and to whom I feel ever thankful.

The painstaking services of our Faculty of Lecturers bear that admirable ardor of their profession, strengthening the standard of our classes, stimulating the duty of study and winning our commendation for a worthy recognition.

In the duties of my position I have been very ably assisted by our eminent House Surgeon, Dr. J. D. Bloom, and his excellent assistants, Dr. W. E. Parker, Dr. S. M. Fortier, the late Dr. James Leake and Dr. J. M. Batchelor, in perfecting the details of management and its practical good.

Miss Mary Agnes O'Donnell, our Superintendent, has my praise for her assiduity and conscientious endeavor.

With every assurance from the records of our graduates, of

their worthiness to the profession of their adoption, and of their sincerity in the purports of its teaching, I gather the pleasure of reward, and entrust them to the labor of their calling with confidence and the hope that God may speed them.

My duties, and the ripened fruits of our labors, bear the impression of your kindly dictation, encouragement and advice, with the active support of your associate Administrators, that is my privilege to appreciate, and for the people of our dear State to thank and bless you for.

Respectfully submitted,
SISTER AGNES.

DIRECTRESS.

Report of the Chairman of the Faculty.

CHARITY HOSPITAL, STATE OF LOUISIANA, NEW ORLEANS, December 11, 1896.

Dr. E. S. Lewis and Dr. F. Loeber, Members of the Medical Committee, Charity Hospital Board of Administrators:

Gentlemen—Another year carries the record of a substantial approval of the boon of the Training School of Nurses, that has enhanced the charity of its making, and in its growth strengthened the fiber of its structure and permanency of organization.

Its creation bore an impetus of purpose that called forth the energy of enthusiasm to convincing effects, and in its fixed and improving advantages, the Hospital service presents every facility in the care of the sick that could be made praiseworthy.

The stimulus of work to the end of direct and effectual medication and feeding, incited by the rivalry of study and the ambition of pride, inculcates the happiest possible impulse for the good of the sick poor and the benefit of suffering human kind. Through the pathway of worldly distinction is carried the better traits of mercy, and to a less exalted station than is its inherency, for the good of the preferment is the favor of its classic features.

I feel, therefore, honored in the distinction of reporting upon the continued progress of so great a gift to the well-being of our poor and the honor to your Board's administration.

The premise worthy of its proof bears the sequence of its conclusion in the compliment and pleasure of this day.

The graduates of the preceding year have responded to every demand upon their services, and the reports of them have been very gratifying. To the curriculum of study has been added during the year, and with apartments within this institution for its purpose, a course upon Invalid Cooking.

The instruction is given by two very thoroughly trained Sisters of Charity, and the course is made an essentially practical one; every pupil being required to give evidence of her fitness for these duties, acquiring a degree of efficiency that is made requisite.

The interest that this departure has aroused among our pupils is very happy, and as a result of its very favorable reception, inspired the little volume, "The Recipes of the Charity Hospital Training School for Nurses," written by our distinguished and respected Directress, Sister Agnes, and that is given to each graduate as a souvenir of the School.

The various lectures have been conducted by the gentlemen of the Faculty with promptness and regularity.

The oral and written examinations have been held at the expiration of each term and daily class studies have been conducted by the Superintendent.

The teaching has been thorough and systematic and every advantage has been taken of increasing the facilities for instruction,

The Faculty has lent every effort to the betterment of our classes, and the excellence of this class gives emphasis of how well the indulgence of these gentlemen has been appreciated.

I submit, with much regret, the resignations of Dr. P. Michinard, Dr. W. E. Parker and Dr. S. P. Delaup. These gentlemen were efficient lecturers and very diligent in their interest and attention.

The teaching was very effectively supplemented during the last session through the kindness of Dr. J. F. Schmittle, Dr. Marion Souchon, Dr. J. B. Elliott, Jr., and Dr. J. M. Batchelor, whom I respectfully recommend for election as members of the Faculty of Lecturers.

Our departed friend, Dr. James Leake, whose scholarly attainments and gifts of personality we grieve the loss of, completed the course assigned him just prior to his unfortunate death.

The vantage in the consummation of a mission so freighted with the good that a large charity can alone inspire and teach, tending to the dissemination of those truths that dispel the error of superstition and ignorance, and inculcate the wisdom of practical hygiene, sanitation and care of the sick, is commensurate with the honored disposition of our Governor, and your worthy Board.

The graduating class, comprising ten pupil nurses and eleven Sisters of Charity:

LIST OF GRAUATES.

Mrs. Ruby Boyette, Miss Ella Comford, Miss Lylie Currie, Miss Emma C. Hartwig, Miss Adelaide F. Huyghe, Miss Maggie Marron, Miss Willie L. May, Miss Henrietta S. Purdon, Miss Mary D. Seddon, Miss Gracie Taylor, Sister Aloysia, Sister Augustine, Sister Catherine, Sister Cecelia, Sister Euthelia, Sister Fidelis, Sister Juliana, Sister Louise, Sister Mary Joseph, Sister Regina, Sister Valentine, are herewith recommended, having complied with all the requirements and very successfully stood the examination, as justly deserving of the Diploma and Medal of the Charity Hospital Training School for Nurses.

Respectfully submitted,

J. D. BLOOM,

CHAIRMAN OF FACULTY.
